## Dimlite

### Applications

**DIMLITE** dimmable bulb made by **LUXLITE** is another fine example of technological milestone for the consumers not to limit their CFL application. Until recently it was not possible to regulate lighting intensity of a fluorescent bulb because of fluorescent tubes uses inert gas to ignite light rather than continuously burning filaments as in a halogen or incandescent bulbs.

Arrival of **DIMLITE** CFL to this horizon is creating a new wave to designers to rethink lighting concepts for modern architecture with ever increasing demand of environmentally friendly building design. **DIMLITE** is also making life easy for ordinary consumers to enjoy the luxury of lighting intensity control without compromising energy saving.

**DIMLITE** bulbs are self ballasted so no changes necessary in existing dimmable lighting fixture. Easy "plug & play" bulb installation, making it a possible for various dimmable lighting fixtures like table lamps in homes, hotels, motels, clubs etc.

Save Energy = Save Money

### Replacements

15W = 75W  
20W = 100W  
23W = 125W

Watts	Lumens	Diameter		Length (MOL)	
15 W	900	60mm	2 6/16"	115mm	4 8/16"
20 W	1200	60mm	2 6/16"	120mm	4 11/16"
23 W	1400	60mm	2 6/16"	130mm	5 0/16"

Dimming range 100% - 10%

ISO-9001 Certified manufacturer

**LUXLITE**®
